

Plan-then-Generate

Prompt: In the park, the person playfully tosses their hair back, radiating joy.

Planning Thinking: I should convey "playful" via buoyant posture (slight backward lean, relaxed shoulders) and a bright, eye smile. The hair toss should be captured at peak motion-hair arcing back with minimal blur only at the tips so the face stays sharp. The park should feel airy and sunlit (soft greens, path/trees as framing, distant elements kept vague). The depth of field should be shallow, keeping the subject crisp and the background in warm bokeh.

Thinking Generation

Generate-then-Reflect

Prompt: Color Change of Red Cabbage pH Indicator After Being Dropped into the cup.

Direct Generation

Reflect: The edit changes the drink color to a bright purple... background keep same... However it is chemically incorrect... so the correct color is red...

Evaluation

Failure Analysis: The liquid turned purple. Lemonade is acidic, so the red cabbage indicator should turn it pink or reddish, not purple (which indicates a neutral pH).
Improvement Plan: Change the liquid color to bright pink.
